Press release for Bellows couplings series BK2

Picture: RW80304A

Text: E_BK2_RW80304A.doc

High-precision bellows couplings series BK2 up to 1.500 Nm

Taking up the challenge of more exacting technical demands in modern machine construction, R + W has increased its BK2 series of bellows couplings up to 1.500 Nm.

Due to their high torsional rigidity, the couplings transmit the applied torque with angular exactness and zero backlash. Misalignment of shafts in the axial, angular or lateral direction is compensated by the metal bellows.

Low moment of inertia is another benefit provided by these couplings. Shaft diameters from 10 to 80 mm are accommodated.

A new catalogue gives specifies and users a quick overview of the most frequently required models.
