Press release: Bellows Coupling BKC

Picture: RWC0115D
Text: BKC_RWBKC.doc

Compact Economy Class Metal Bellows Coupling up to 500 Nm

R+W has developed yet another economy class product with features beyond comparison. The main advantage of the BKC is to be found in its incredibly short design for space restricted installations.

The metal bellows compensates for axial, angular and lateral misalignments at once. As a result of the extra short design, the BKC is very light and stands out with a low mass moment of inertia.

The BKC is available for torques from 15 to 500 Nm with possible bore diameters of 8 to 75 mm. Due to the frictional clamped connection the BKC is absolutely backlash - free and very easy to mount and dismount. Keyways are available upon request.

The new BKC: A state of the art coupling at a competitive price.
